

Tesla subscriptions, priced in CAD in January 2026

Name	Monthly Charge (CAD)	What's Included
Standard Connectivity	Free (included)	Basic maps and navigation (no live traffic visualization), music/media streaming over Bluetooth, software updates over Wi-Fi, and most connectivity features when connected to Wi-Fi. No cellular data access for streaming, browser, or advanced map features.
Premium Connectivity	\$13.99	Everything in Standard Connectivity, plus cellular-enabled features: live traffic visualization, satellite-view maps, streaming music/media (e.g., Spotify, Netflix over cellular), internet browser, Caraoke, Sentry Mode live view, and more — for use anywhere without relying on Wi-Fi.
Basic Autopilot	Free (included)	Core driver-assistance features on all new Model Y vehicles: Traffic-Aware Cruise Control and Autosteer (lane centering on highways/major roads).
Full Self-Driving (FSD) (Supervised)	\$99	Everything in Basic Autopilot, plus advanced features: Navigate on Autopilot, Auto Lane Change, Autopark, Smart Summon, Traffic Light and Stop Sign Control, and autosteer on city streets (all under active driver supervision). Requires compatible hardware.
Extended Service Agreement (ESA) Subscription	Varies (~\$70–\$100+, depending on model/age)	Optional extended warranty coverage after the standard 4-year/80,000 km Basic Vehicle Limited Warranty expires. Covers most repairs (with \$135 deductible per visit), including Roadside Assistance. Flexible month-to-month; max term 48 months/80,000 km additional. Available for out-of-warranty Model Y vehicles.

Notes:

- Acceleration Boost — Available as a one-time purchase (~\$2,700 CAD) for eligible Long Range AWD Model Y variants (improves 0-100 km/h acceleration); not a recurring subscription.
- No other recurring Tesla feature subscriptions (e.g., no separate Supercharging or insurance subscriptions from Tesla directly).
- Third-party services may offer full-vehicle subscriptions, but these are official Tesla options.
- Always check your Tesla app or account for exact eligibility, current pricing, and any trials/complimentary periods. Prices and features can vary by vehicle year and configuration.

Full Self Driving In Detail

Tesla's Full Self-Driving (FSD) (Supervised) is an advanced driver-assistance system available on the Model Y (and other Teslas) that builds on Basic Autopilot. It provides more automated capabilities on highways, city streets, and residential roads, but requires active driver supervision at all times—you must stay attentive, keep hands on the wheel (monitored by the cabin camera), and be ready to intervene. It does not make the vehicle fully autonomous.

As of January 2026, FSD (Supervised) is powered by the latest software (version 14.x series), trained on billions of miles of real-world data. It handles end-to-end driving: from entering a destination in navigation to arriving, including steering, accelerating, braking, lane changes, turns, and more. Features continue to improve via over-the-air updates. Key Features of FSD (Supervised)

Feature	Detailed Description
Basic Autopilot Features (included foundation)	- Traffic-Aware Cruise Control: Adapts speed to maintain safe distance from vehicles ahead. - Autosteer: Keeps the vehicle centred in its lane on highways and well-marked roads.
Navigate on Autopilot (on highways)	Automatically guides the vehicle on highways: suggests and makes lane changes, navigates interchanges/forks, takes exits, and transitions to local roads based on your navigation route.
Auto Lane Change	Automatically changes lanes when safe (e.g., to pass slower vehicles or follow the route), with or without Navigate on Autopilot active.
Autopark	Detects parallel or perpendicular parking spots and automatically parks the vehicle (you supervise and confirm).
Smart Summon / Actually Smart Summon	Allows the vehicle to navigate parking lots and come to you (or a chosen spot) autonomously over short distances, avoiding obstacles (useful in crowded lots).
Traffic Light and Stop Sign Control	Detects traffic lights and stop signs, automatically slows/stops the vehicle when approaching, and proceeds when safe (with your confirmation/supervision).
Autosteer on City Streets	Extends lane centring and speed control to urban/residential roads, following road curves and handling complex scenarios.
End-to-End Driving on City/Residential Streets	The core of modern FSD: Once engaged, the vehicle attempts to drive to your destination autonomously—handling intersections, turns (left/right), roundabouts, yielding, navigating around vehicles/objects, and highway entry/exit—all under supervision. It can operate on almost any road type.
Additional Enhancements (v14+)	Speed Profiles: Dynamically adjusts driving speed based on your profile, speed limits, traffic, and conditions for smoother/more natural driving. - Arrival Options: Customizable behaviours when approaching destinations (e.g., parking preferences). - Improved handling of complex scenarios like construction zones, narrow roads, or oncoming traffic (though intervention may still be needed).

Important Notes

- **Supervision Required** — The system uses cameras for 360° visibility and constantly monitors driver attentiveness. Disengagement or warnings occur if you're not paying attention.
- **Limitations** — Performance varies by road conditions, weather, software version, and region (fully available in Canada). Driver intervention is often needed in challenging situations (e.g., complex intersections, poor markings).
- **Availability** — Requires compatible hardware (most recent Model Y vehicles have it). Features roll out/improve with software updates.
- **Safety** — Tesla reports lower collision rates with FSD engaged compared to manual driving.

For the absolute latest details, check your vehicle's touchscreen (Controls > Autopilot) or the Tesla app, as capabilities evolve rapidly. If you have FSD subscribed, you can try it with a navigation route set!
